Graphic Techniques for Illustration: GRDN2200

Professor: Randall Kozak

November 12, 2018

## PartA#1. Using Image Trace

Picture 1

This illustration is created with a real image of our family then applied Image Trace with **three colors** and high resolution in order to convert to an Adobe drawing.

Picture 2

This illustration is created with a real image of our family then applied Image Trace with **six colors** and high resolution in order to convert to an Adobe drawing.

## PartA#2. Using masks

This illustration is created with an image of Istanbul Bridge in Turkey when we went to Canadian Embassy in 2012. We applied Masks with 15 polygonal objects. This technique is very useful in web designing and promoting products in online marketing.

### PartA#3. Using Filters

This illustration is created with an image of Istanbul Tunnel in Turkey in 2012. We applied texture filters. This technique is very useful in promoting photography labs, also camera or lens factories. This gives a sense of traditional, historical memorial events.

## Part-B- Imaginative and original artwork

*Increase your business revenue with reliable professionals ...*

This illustration is created with a self-portrait. We applied 6 colors Image Trace and texture filters on this image. The background is made by gradient tool fading left to right from blue to white. Next, we applied Masks by making 7 polygonal objects, using compound path, using masks on the portrait. With a text comment at the bottom and some statistics objects inside the component areas of the portrait, also 6 gradient colored oval objects we promoted a talented company to consult businesses to develop, growth and increase revenue.
